Experiment No. 9: AI and Analytics Using Zia

AIM

To study the AI capabilities of Zia and explore data analysis and insights in the Event Registration Management System using Zoho Creator.

THEORY

Zia is Zoho's AI assistant that helps users analyze data, identify patterns, and generate insights. In Zoho Creator, AI and analytics features help users understand event registration data and support better event planning and decision-making.

Key Features:

- **Data Analysis:** Analyzes event registration records to identify registration trends and patterns.
- **Charts and Reports:** Displays event registration statistics using charts and visualizations.
- **Predictions:** Supported AI features may help predict registration trends based on available data.
- **Natural Language Interaction:** Supported Zia features may allow users to ask questions about event registration data using natural language.

PROCEDURE

1. Log in to Zoho Creator and open the Event Registration Management System.
2. Add sample event and participant registration records to the application.
3. Navigate to the Reports section.
4. Create charts and summary reports using the available event registration data.
5. Explore the Zia or AI-powered features available in the account.
6. Analyze registration trends, event-wise participant counts, and registration status.
7. Verify the AI-generated insights using the application records.

APPLICATION

In the Event Registration Management System, Zia analytics can help identify the number of registrations received, compare participation across events, monitor registration status, and generate reports for event planning. Charts and summaries help organizers and administrators evaluate registration activity efficiently.

RESULT

The AI and analytics capabilities of Zia in Zoho Creator were studied. Reports, charts, visualizations, and available AI insights can help analyze event registration data and support better event planning and decision-making.
